

Tailor-made for each application

Are you looking for a new fender or a refit for your vessel? **Contact us and find out what we can do for you!**

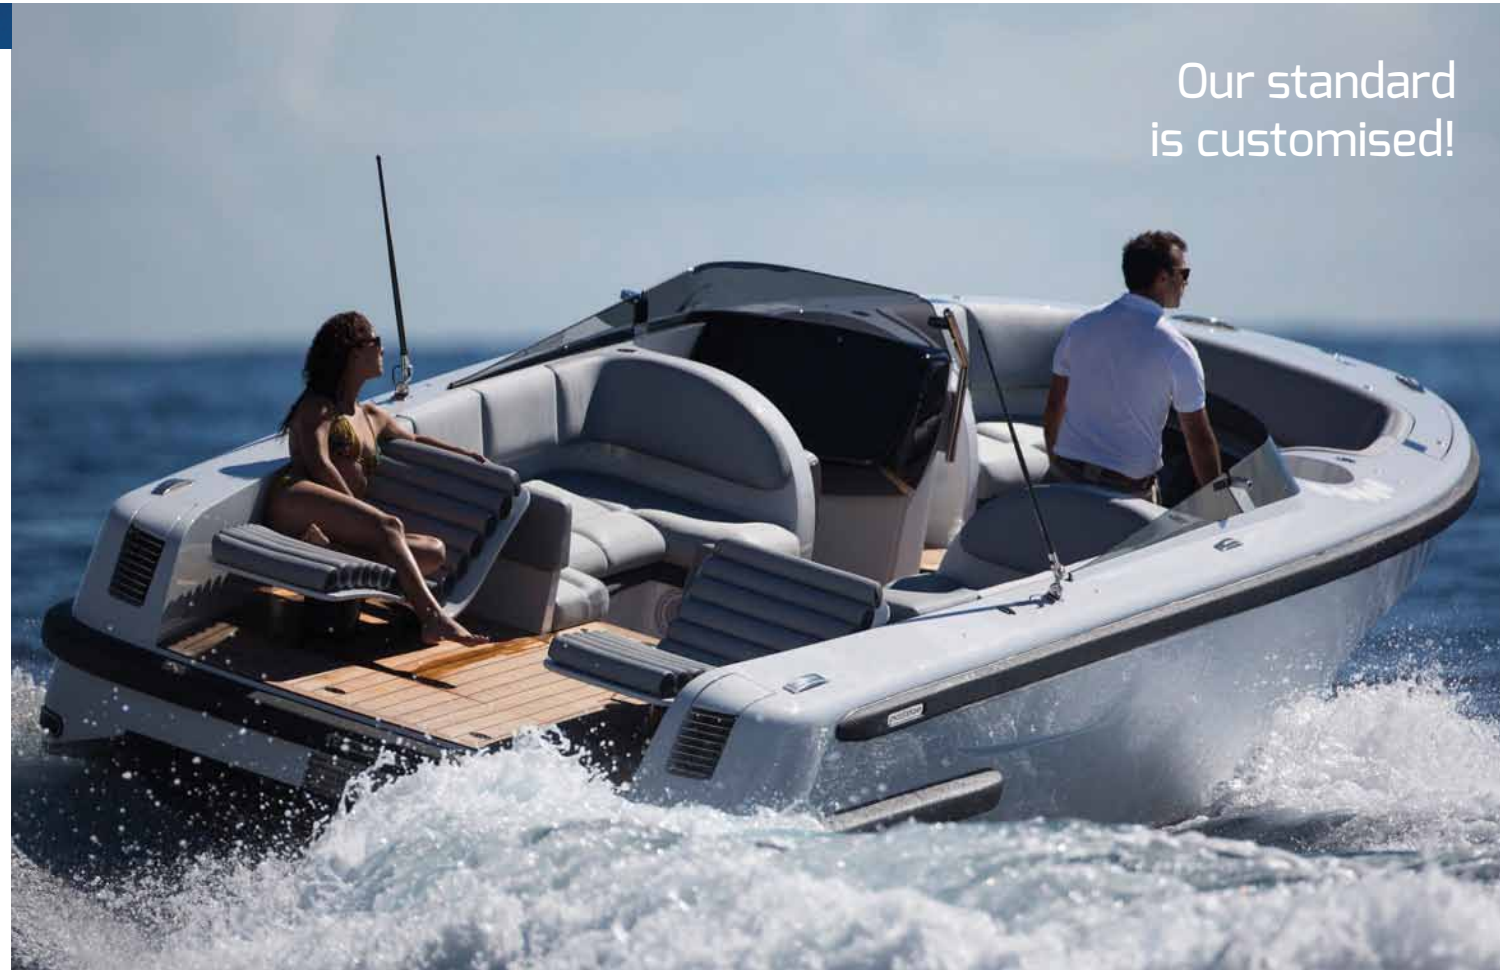

We build fenders of any shape and size with different dampening characteristics to fit the individual requirements of your vessel.

Our fenders are ultra light weight, have freedom of form and seamless bends. The design of the fenders can be adapted to all hull shapes. At Fender Innovations we can provide the complete, tailor-made and optimal fender package.

Our fenders are suitable for semiplaning and planing vessels such as Superyacht tenders, All weather life boats, Tenders, Fast rescue, Wind farm support, Heavy Duty RIB's, Research and survey, Unmanned marine systems and Naval applications.

Our standard is customised!

- » Ultra light weight fenders, with a sleek design
- » Each design is tailor-made and optimised for the vessel and its intended usage
- » A wide spectrum of applicable forms, angles and curves

Light weight, strong & flexible fender systems

www.fenderinnovations.nl

- » **Sleek design & seamless bends**
The seamless corners and customised fit give our fenders a sleek design.
- » **Tailor-made & freedom of form**
Each fender is tailor-made for the vessel and it's intended use.
- » **Ultra light weight**
Spectacularly strong and light weight alternative to traditional fender systems.
